HAIR RESTORATION

Many changes come with aging, like how the hair grows and its thickness and density. Changes like these are just some of the typical effects of the aging process. But when the hair starts to become thin, and evident differences in its growth pattern can be seen, it can begin to appear patchy in some areas with significantly far less scalp coverage.

In years past, the solutions for reversing the signs of thinning hair and hair loss were few and far between. Most consisted of invasive surgeries that left behind dramatic, hard-to-cover scars or messy and sometimes risky medications. But all that is changing with the advent of new and innovative non-invasive hair treatments, like Alma TED hair restoration, that address hair loss concerns effectively.

It is normal to shed between 50 and 150 hairs daily. But when more than moderate amounts of hair are falling out (you may see more than normal amounts of hair on your pillow, in your brush, or at the bottom of your shower), it's time to evaluate why it's happening and what to do about it.

Dr. Maki Rheume, MD, spearheads AdvancedMD Aesthetics of Atlanta. An expert injector and aesthetic specialist with a keen eye for natural rejuvenation, Dr. Rheume welcomes every patient with an initial consultation before each treatment. She listens to every patient intently and compassionately to create an individualized beauty and anti-aging plan for your needs.

AdvancedMD Aesthetics of Atlanta is the leading aesthetic medical spa and internal medicine center in Marietta, GA. Led by Maki Rheume, MD, AdvancedMD Aesthetics combines modern-day aesthetic solutions with the hometown quaintness that Marietta is known for. So, whether you're looking to refresh your appearance or get your hair on a healthy track, the medical team at AdvancedMD Aesthetics can help you establish a custom plan to reach your goals. We are big believers that you can improve how you age so that you age gracefully. Besides improving skin aging, AdvancedMD Aesthetics offers scientifically-innovative body and wellness treatments for a holistic approach to total aging head to toe.

What is Alma TED Hair Restoration?

Alma TED is a pain-free hair restoration treatment that doesn't rely on needles but rather acoustic sound waves and air pressure to drive a specialized hair growth formula with proven ingredients into the scalp. The treatment benefits anyone with hair-related changes and concerns related to stress, hormonal fluctuations, genetics, post-partum, and even COVID-related hair loss. Both men and women who suffer from male and female pattern baldness and non-scarring alopecia see substantial changes in the thickness of their hair and its amount.

The Alma TED system harnesses the power of ultrasound-based energy with a unique tip engineered with Impact Delivery™. This special push-back effect compliments the treatment when topical products are used. Together, this unique approach delivers a non-invasive, non-traumatic option to correct hair loss and thinning hair concerns for noticeable improvement over a series of treatments.

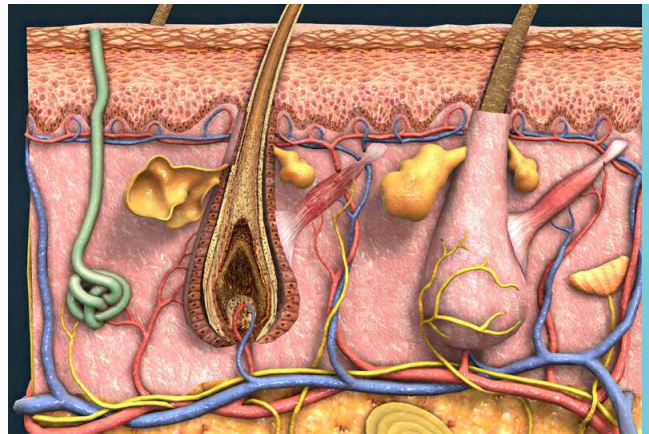

Strengthening the scalp and feeding it with the nutrients it needs to thrive also strengthens the hair follicles so that each strand can grow efficiently. The first treatment results can be seen in about three weeks, with the full results surfacing after the entire treatment.

The regrowth of hair allows patients who have become self-conscious of their hair loss to experience new hair growth and restored hair density, helping them to gain a renewed sense of self-confidence and an improved appearance.

How does Alma TED Hair Restoration work?

Alma TED (transepidermal drug delivery) is a low-frequency hair restoration ultrasound system that harnesses the power of sound waves to grow better, thicker, and healthier hair. The treatment requires the topical application of a unique and specialized mix of hair growth-stimulating ingredients, including growth factors in a special serum, to wake up dormant hair follicles (out of the resting phase) and jumpstart the growth cycle. As a result, the hair begins to grow fuller and thicker in due time.

Unlike other hair restoration techniques, which tend to be more invasive and come with downtime, TED relies upon low-level ultrasound, acoustic sound waves, plus pressure to push the ingredients further into the scalp and deep into the dermal layer of skin. By delivering these ingredients to the appropriate layer of skin, they can nourish and feed the scalp and hair follicles. In addition, the sound wave portion of the treatment creates gaseous bubbles in the skin that allow it to absorb the ingredients for maximum penetration and effectiveness while increasing blood flow.

Studies report that with the treatment, the hair can even grow back to its original shade—an added bonus! Some patients notice results as soon as three weeks, although most see the full effect of the treatment, which consists of three sessions one month apart, at the end of the required number of sessions.

Who is a good candidate for Alma TED hair restoration?

Both men and women can, unfortunately, succumb to the effects of aging hair and hair loss, which is why both sexes are often good candidates for the treatment. Unlike other hair restoration modalities, which only work for one sex, Alma TED hair restoration is suitable for men and women of any age and hair type.

TED works well for anyone experiencing visible changes to their hair growth, including thinning. However, you don't need to be in the throes of hair-related changes or have extreme hair thinning to have TED work for you. Alma TED hair restoration benefits both early-stage and minimal hair loss as well as those who have experienced thinning hair for quite some time.

The treatment helps to nourish the scalp and hair follicles to improve the symptoms of genetic-related, stress-related, post-partum, and even COVID-related hair thinning. It also lessens the effects of male and female pattern baldness and non-scarring alopecia.

What are the benefits of Alma TED hair restoration?

There are several benefits of a complete series of Alma TED hair restoration treatments. Some of the more noticeable effects that patients appreciate include:

- ◆ Pain-free hair growth stimulation that is considered quite comfortable. No incisions, needles, or anesthesia is needed.
- ◆ Vegan and cruelty-free serum to boost hair growth.
- ◆ Each treatment is quick (about 25 minutes), and the results surface fast.
- ◆ TED is a non-invasive way to restore thinning hair so that it grows back thicker, fuller, and healthier.

How much does Alma TED hair restoration cost?

The cost of Alma TED hair restoration varies from person to person, depending on the degree of hair thinning and hair loss. Therefore, each patient should schedule a consultation before receiving treatment for a unique, individualized treatment plan that addresses their particular concerns.

Frequently Asked Questions

- ◆ What are the results that I can expect from Alma TED hair restoration?

Every patient responds to treatment differently, but TED has been clinically validated with more than 20 published studies, and patients rave about the results. After two weeks, most patients begin to notice far less hair shedding, and some even see early signs of growth. One month after the treatment, new hairs will begin to grow. After two months, most patients report increased hair volume, and after three months, many say there is far less scalp show as patchy areas and bald spots begin to fill in.

- ◆ How long do the results last?

The results of Alma TED Hair restoration are typically long-lasting, and the improvement in the hair will continue to improve. However, some patients seek routine maintenance treatments to withhold their results. You may also benefit from combining other hair restoration treatments and products, which will be discussed during your consultation.

- ◆ How many Alma TED Hair restoration treatments are needed?

To reap the benefits of TED, most patients typically require three treatments, although some may need less. When you schedule your consultation, our team will examine the area you wish to treat and design a treatment plan to reach the optimal results.

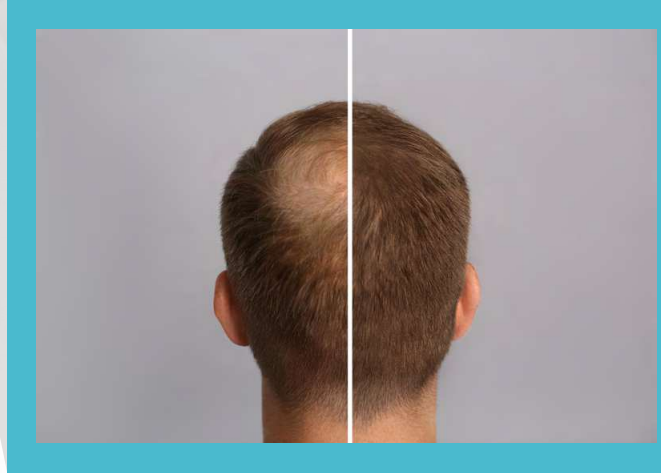

- ◆ Where can Alma Ted be used?

The nice thing about Alma TED hair restoration is that its use is not limited just to the scalp, even though that is the most popular area for treatment. TED works wherever hair grows and wherever thinning hair exists. So some patients choose to undergo treatment on their eyebrows or beard, for example, in addition to anywhere on the scalp. Likewise, your provider may stack other laser treatments with Alma TED to achieve optimal results.

Before and Afters

Get Started with AdvancedMD Aesthetics

If you're ready to get your hair back to a state of healthy and thicker once and for all, there's no better time than now to book a consultation with Advanced MD Aesthetics of Atlanta. A one-on-one consultation with our experienced, professional aestheticians and team of skin experts will determine the best hair restoration treatment for you. We can also customize a package specific to your needs so you can obtain the best results possible from Alma TED hair restoration.
